Claude Certified Architect, Professional. Mega cheatsheet

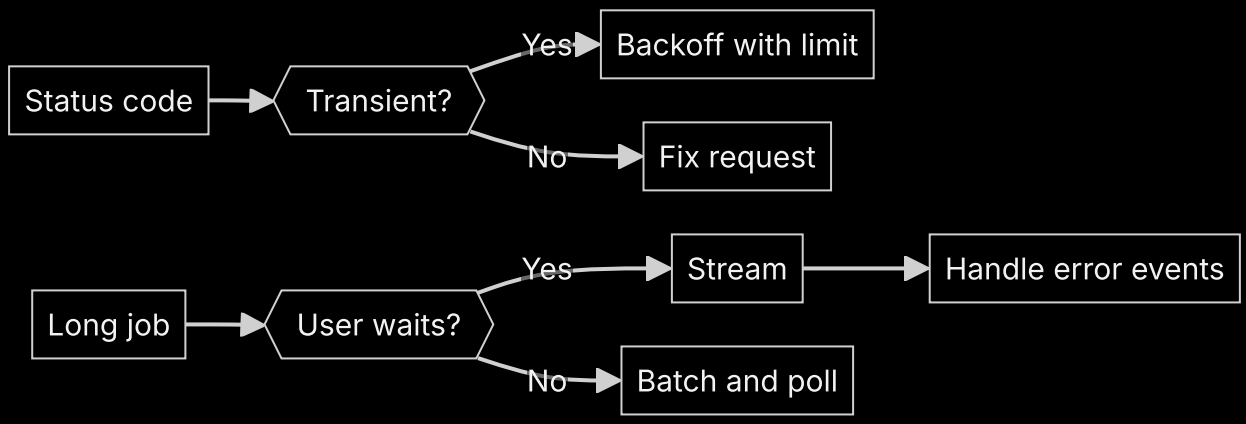

F1 Architecture and business foundations

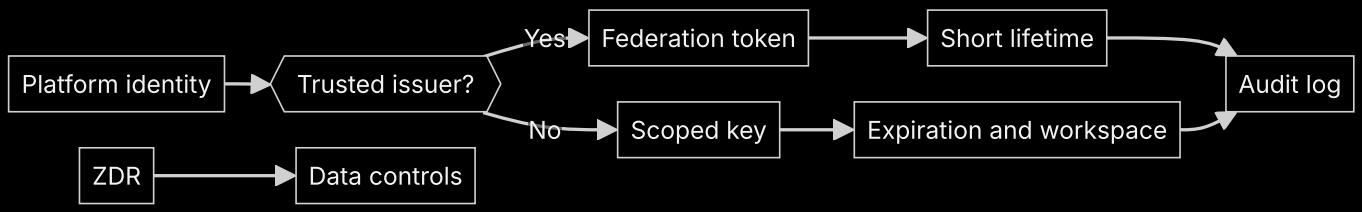

F2 LLM foundations

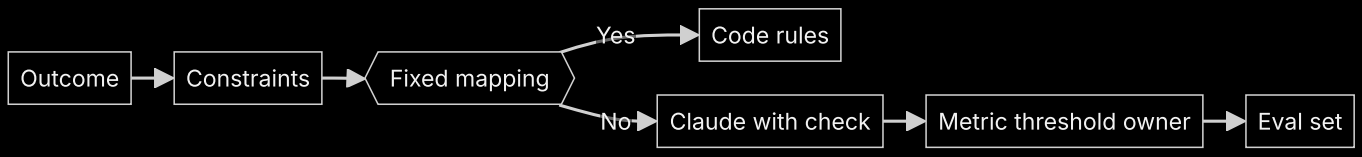

F3 Software and distributed systems

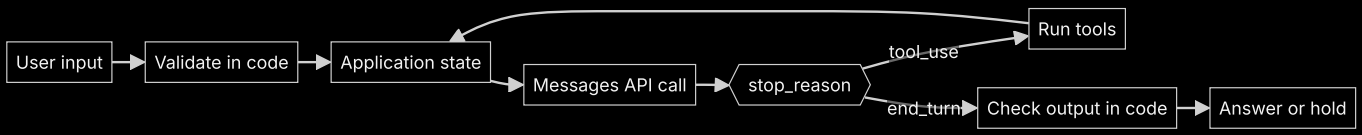

F4 Security and identity

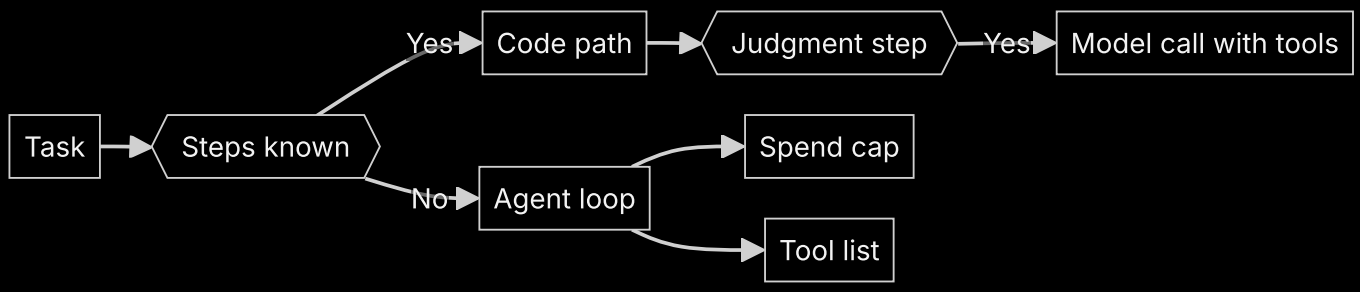

D1.1 Business problem to Claude solution

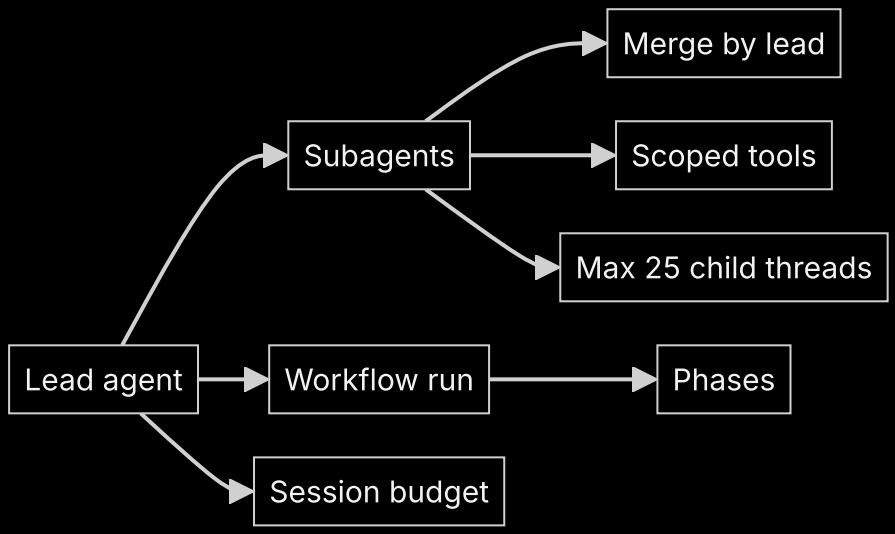

D1.2 End-to-end architecture

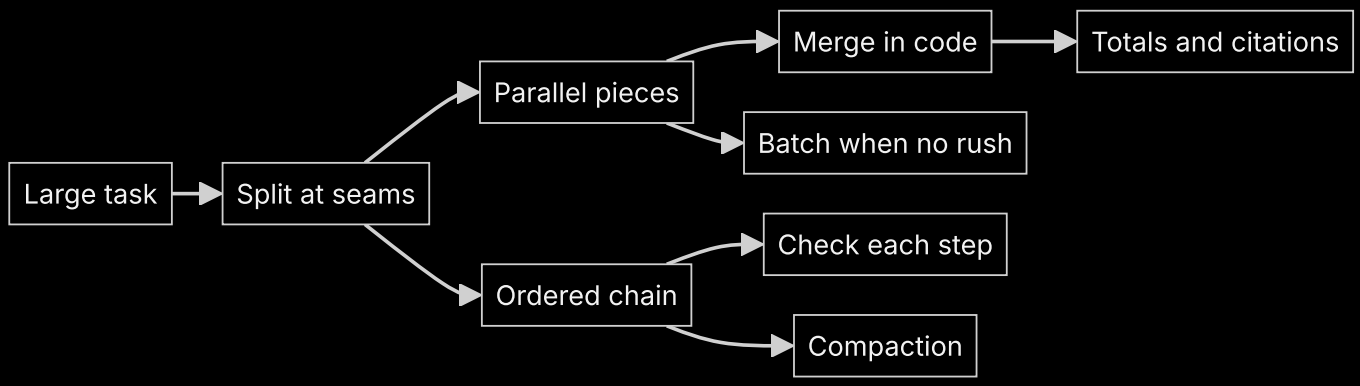

D1.3 Architectural pattern selection

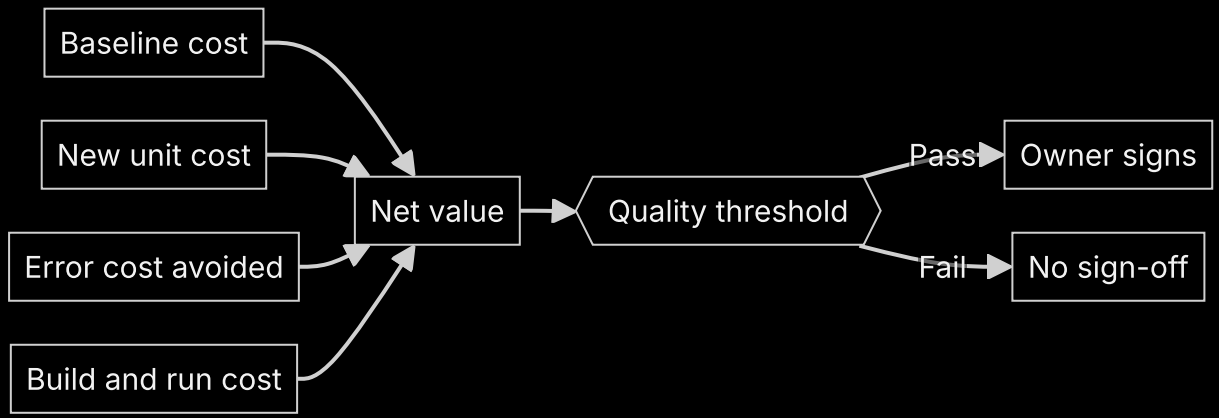

D1.4 Multi-agent orchestration

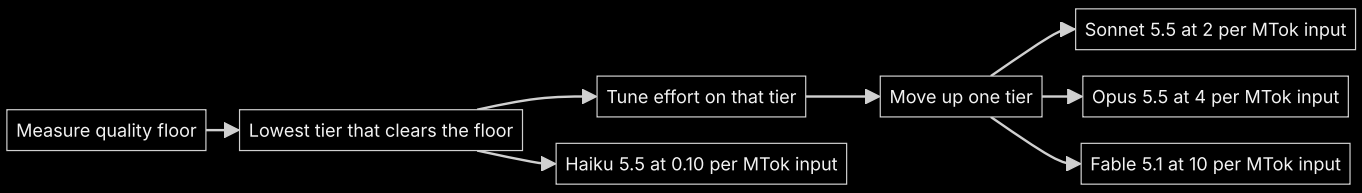

D1.5 Task decomposition

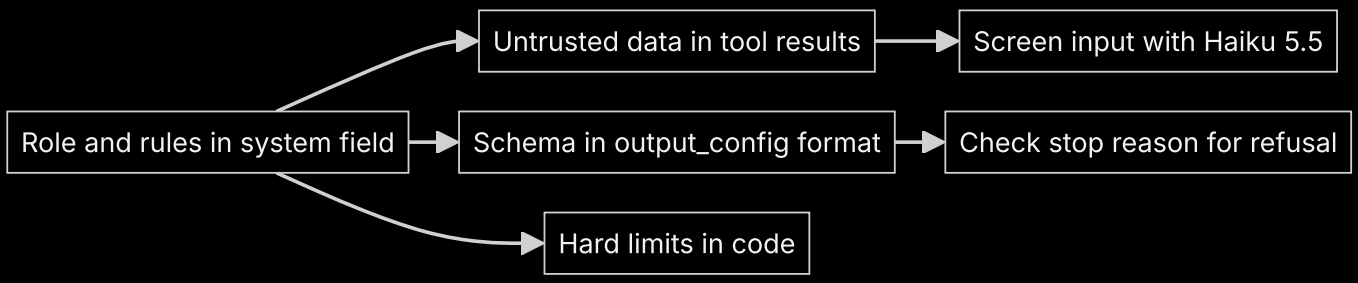

D1.6 Business-value alignment

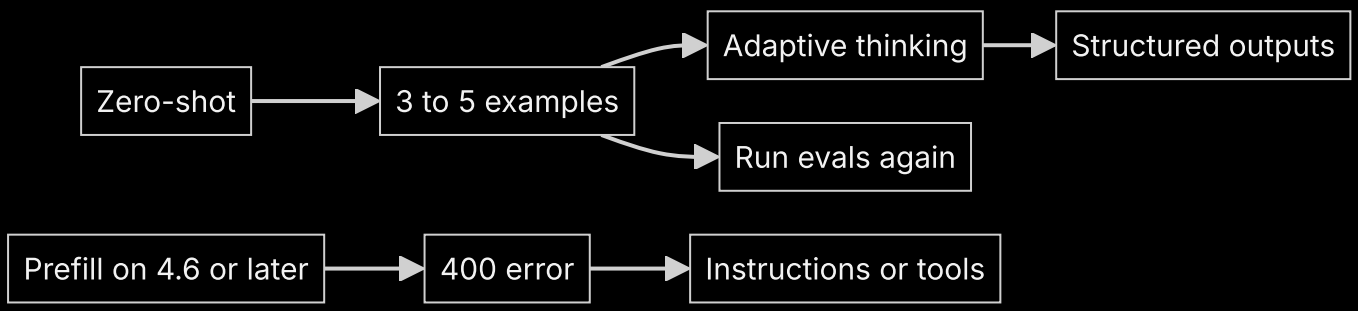

D2.1 Model selection and tier trade-offs

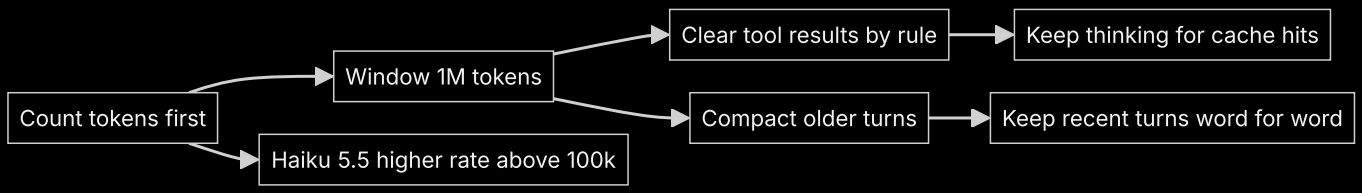

D2.2 System prompts, templates, and guardrails

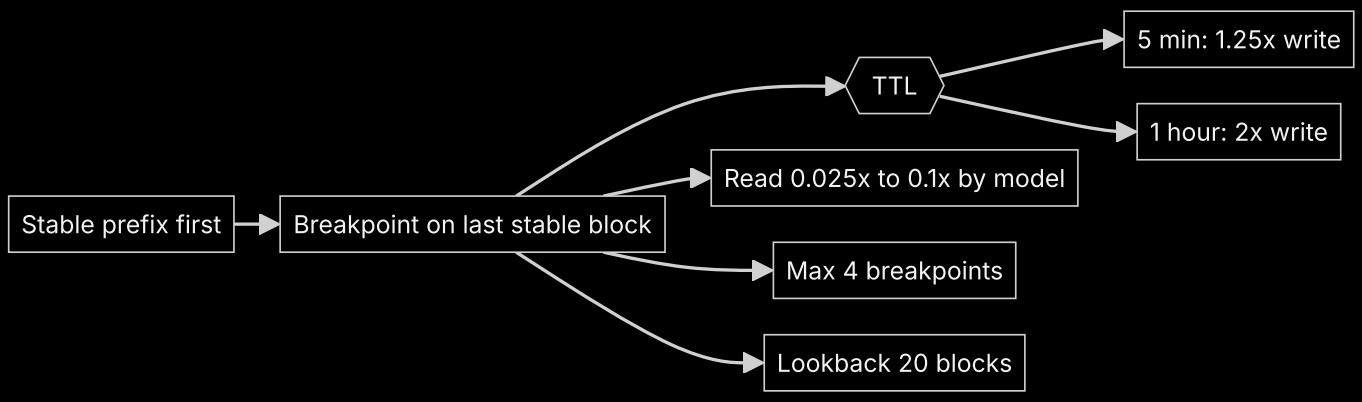

D2.3 Prompt techniques

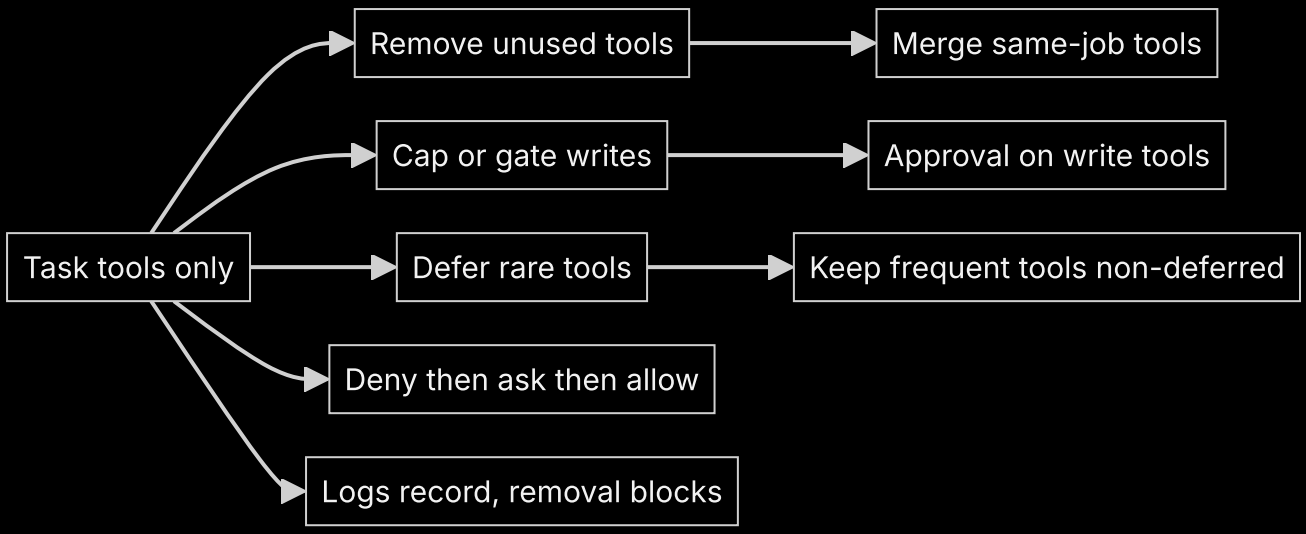

D2.4 Context and token management

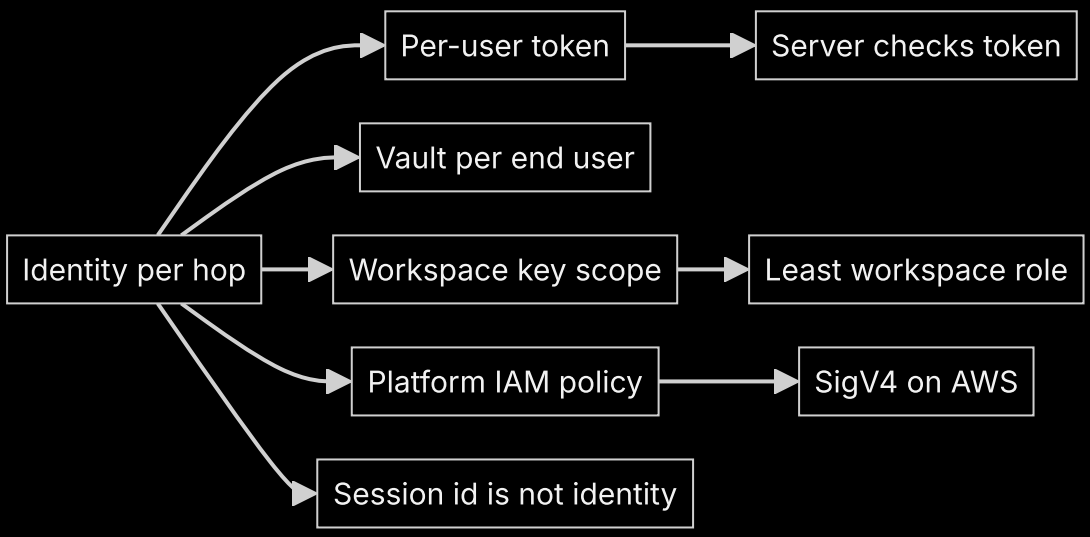

D2.5 Reuse and prompt caching

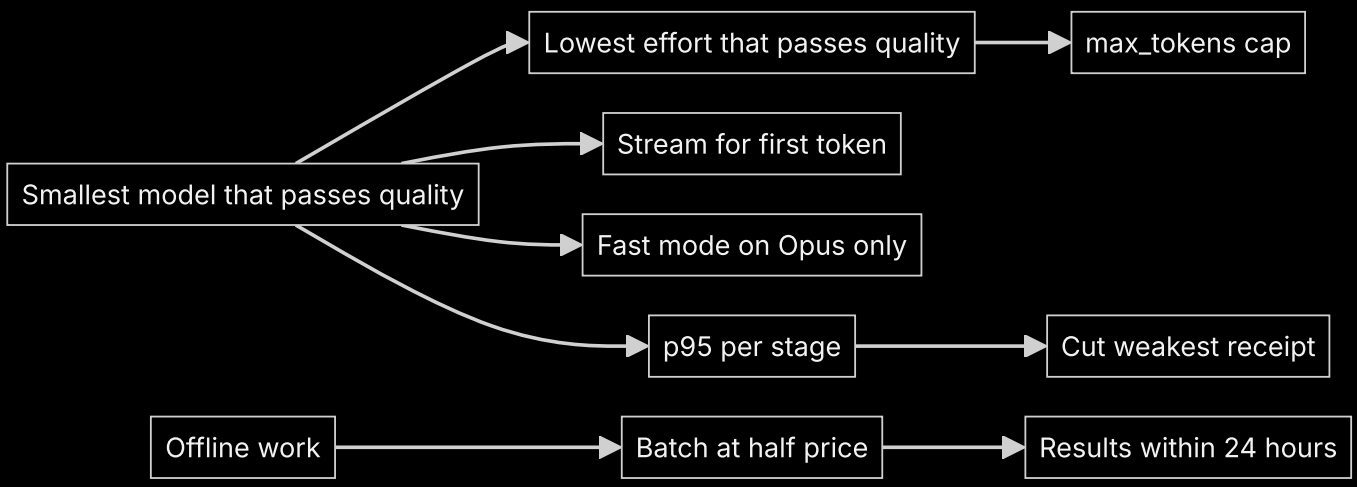

D3.1 Tool capability scope

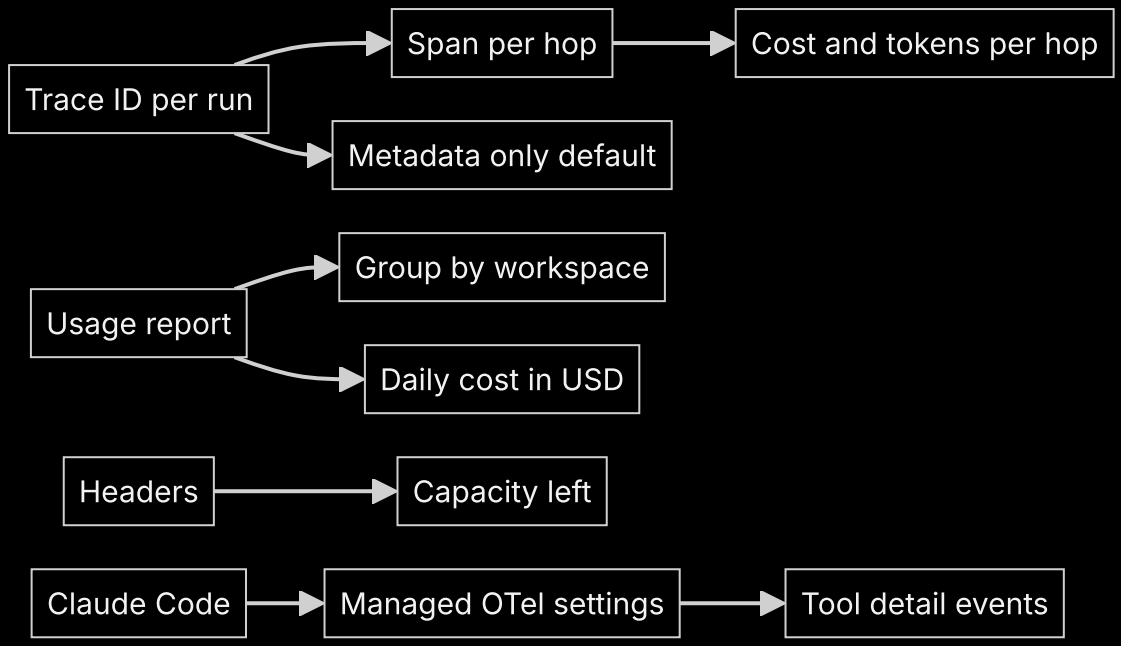

D3.2 Authentication and authorization in integrations

D3.3 Accuracy and latency trade-offs

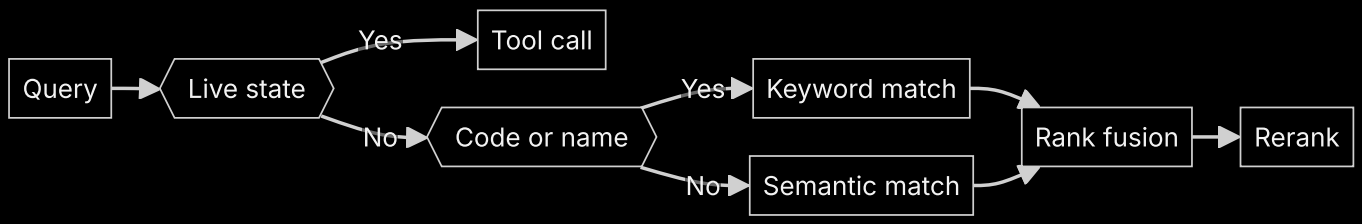

D3.4 Observability at scale

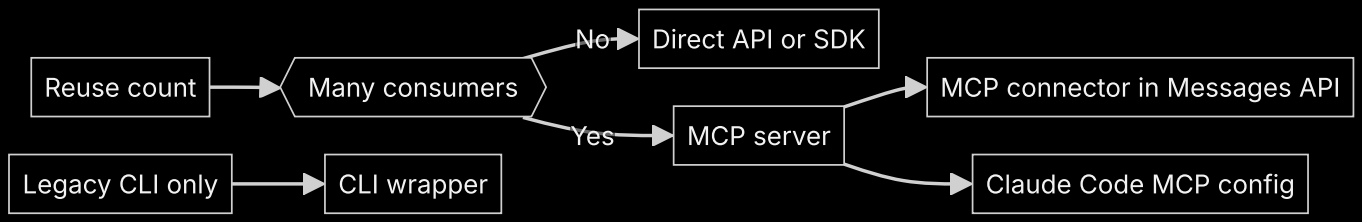

D3.5 The RAG pipeline

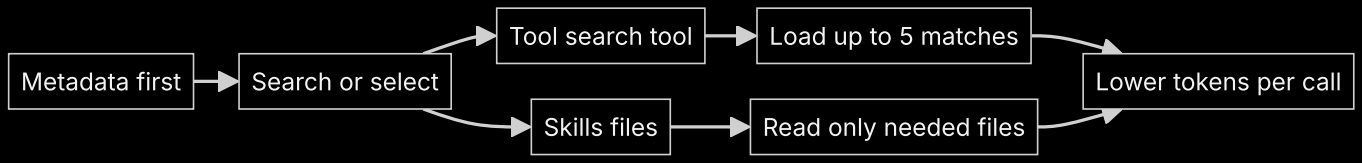

D3.6 Retrieval strategies

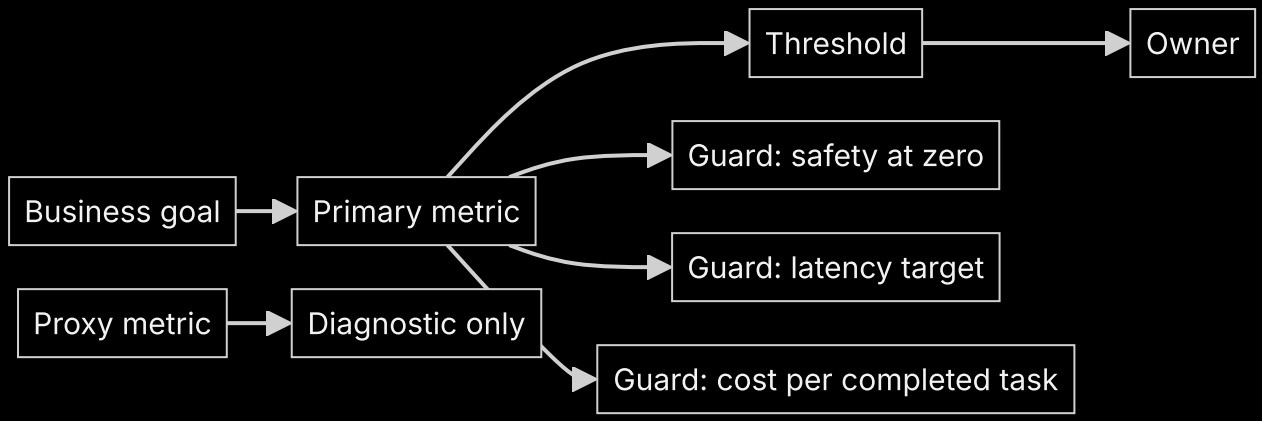

D3.7 Integration mechanisms

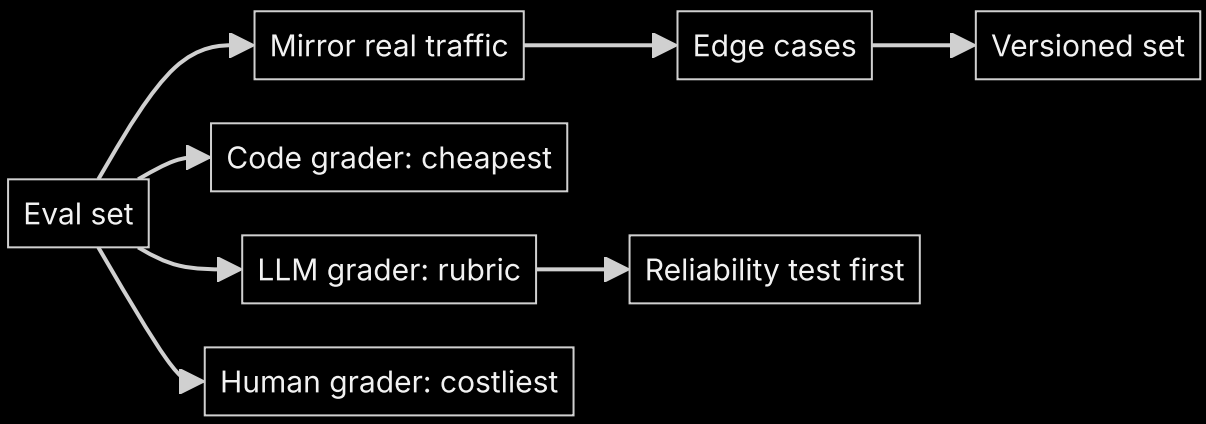

D3.8 Progressive discovery and monolithic context

D4.1 Evaluation metrics

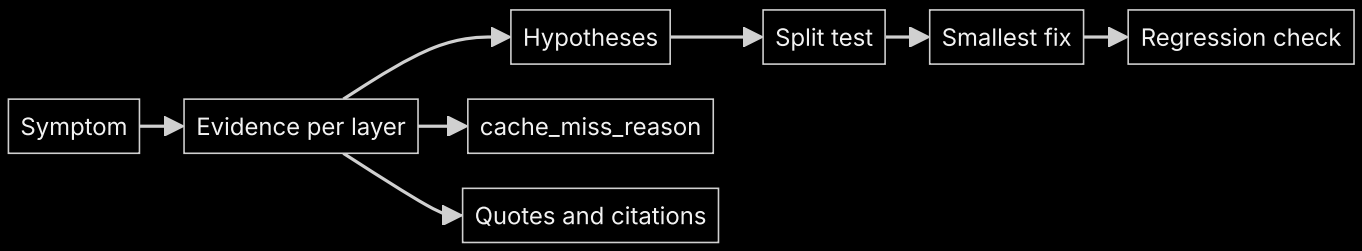

D4.2 Evaluation datasets and frameworks

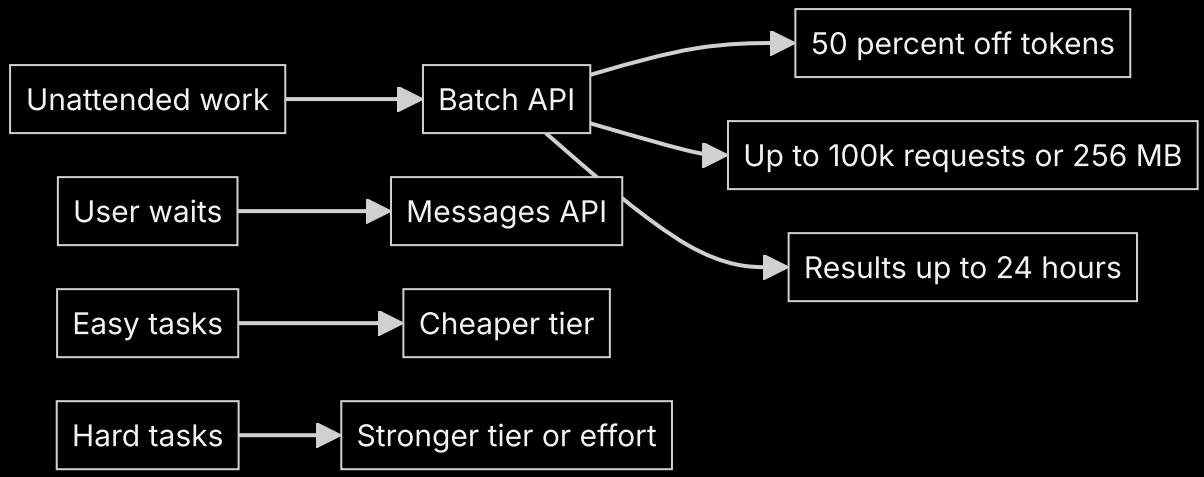

D4.3 A/B tests and iteration

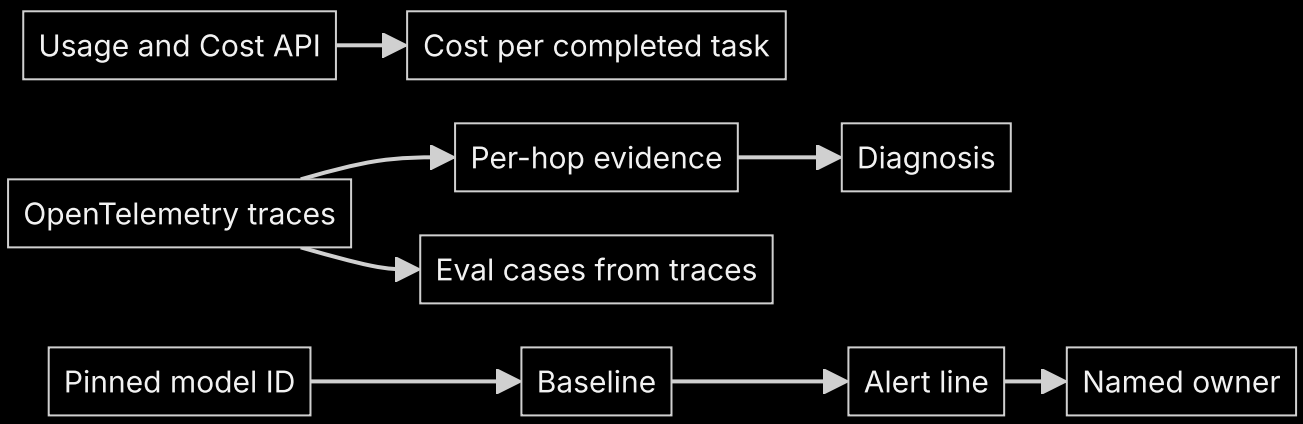

D4.4 Diagnosis at the correct layer

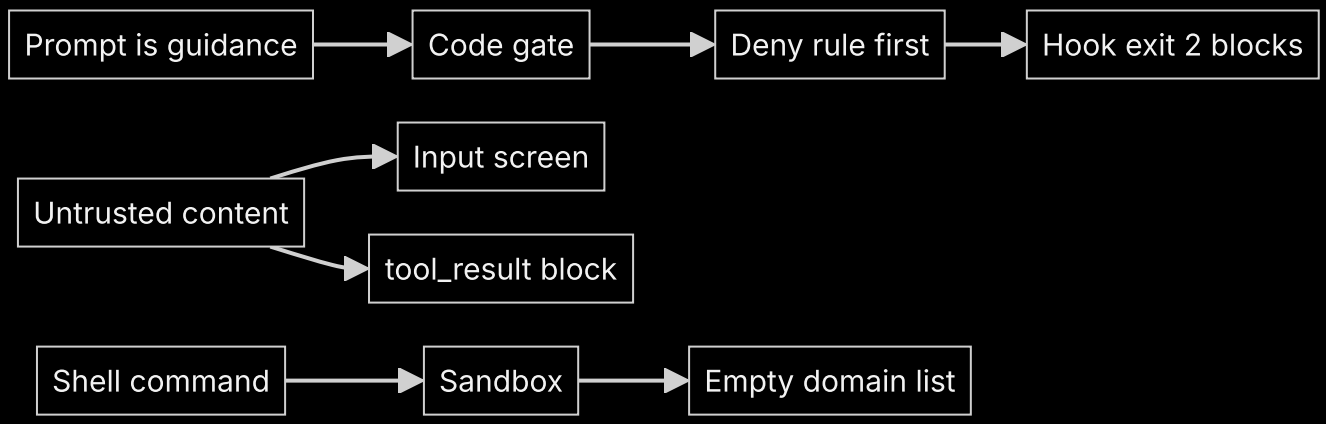

D4.5 Optimization under quality floors

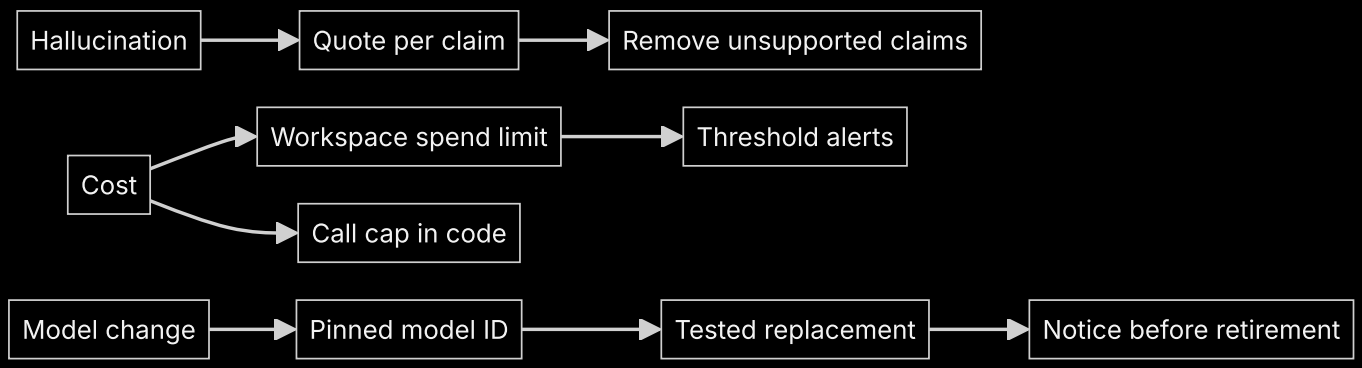

D4.6 Production monitoring

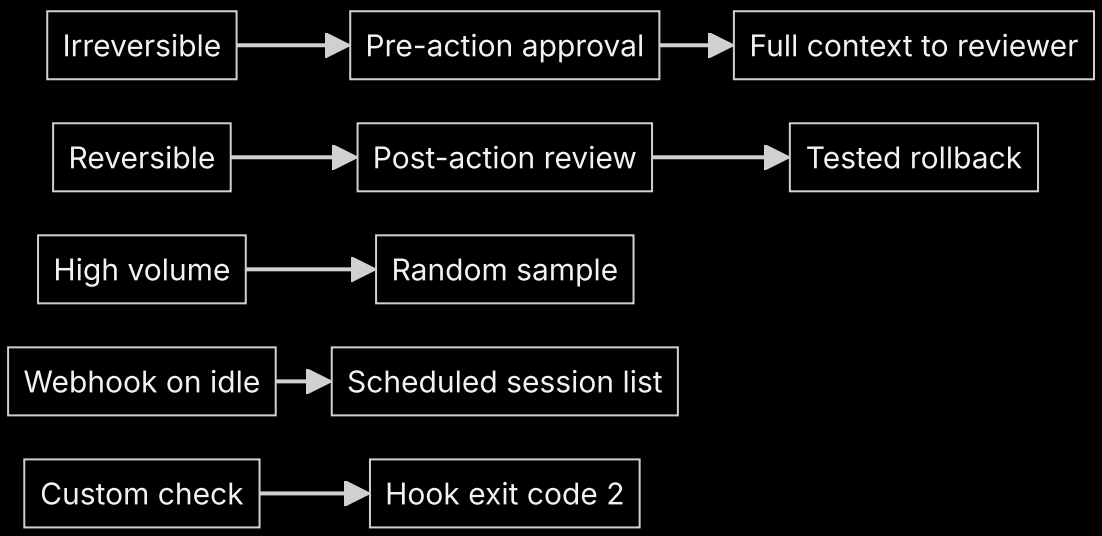

D5.1 Guardrails and safety controls

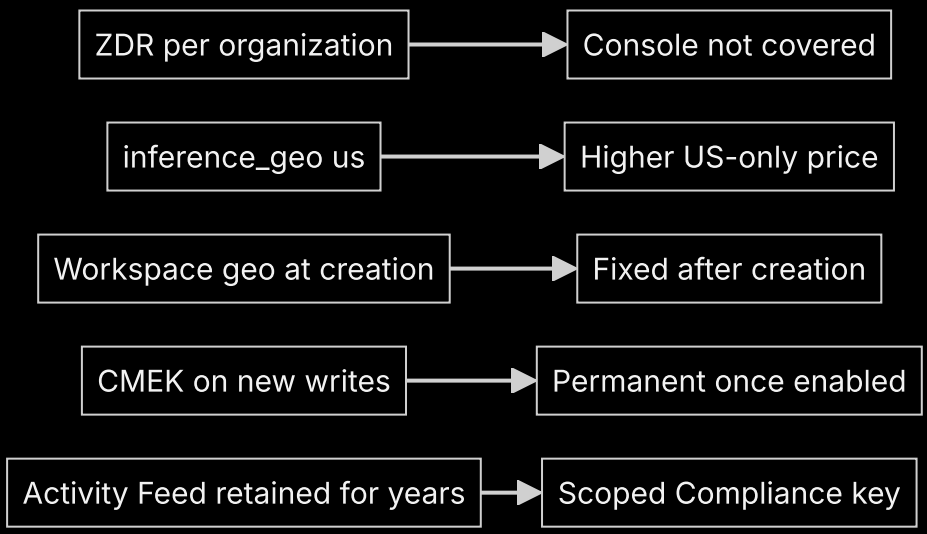

D5.2 Risks and failure modes

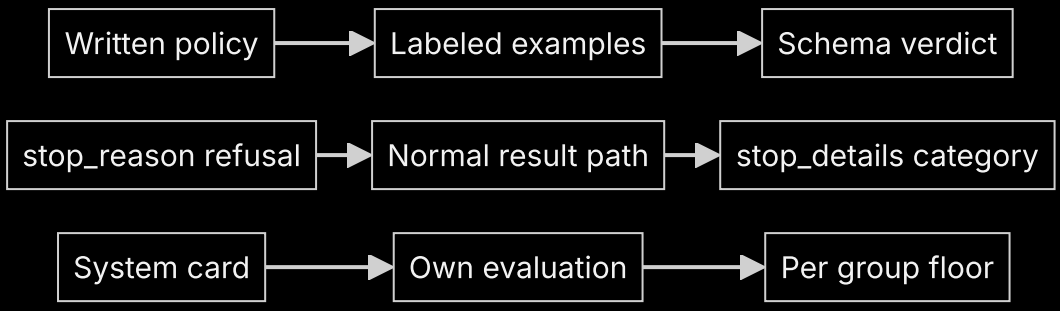

D5.3 Human-in-the-loop validation

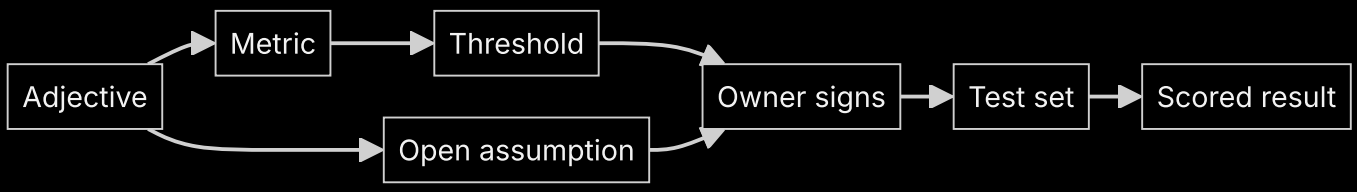

D5.4 Regulatory compliance and data controls

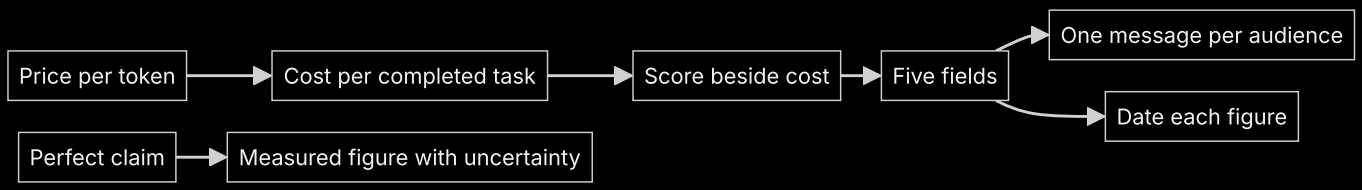

D5.5 Responsible AI

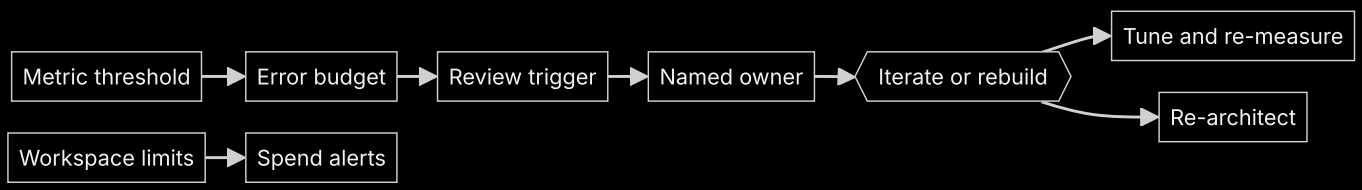

D6.1 Structured discovery

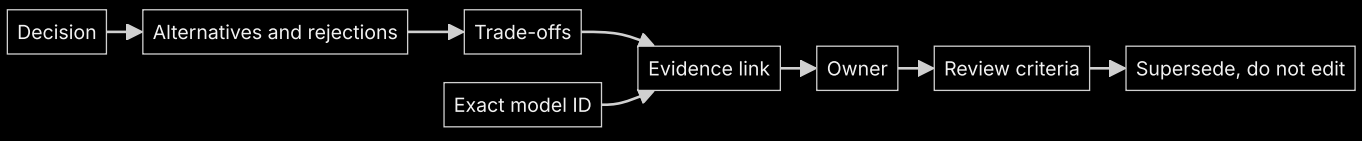

D6.2 Trade-off communication

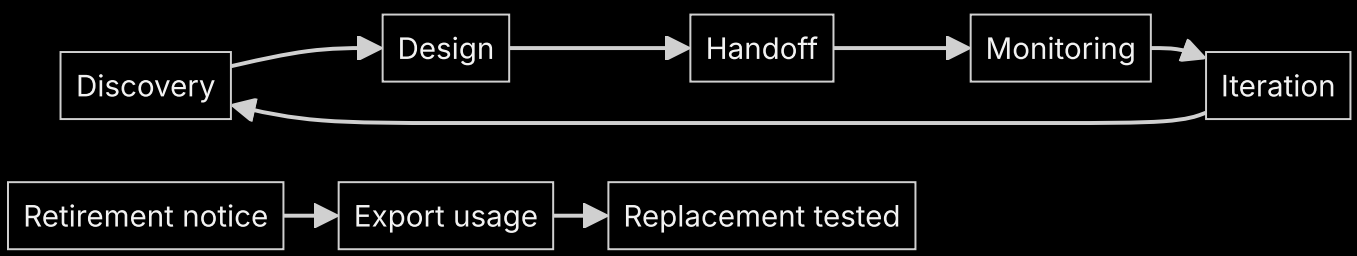

D6.3 Feedback and expectation alignment

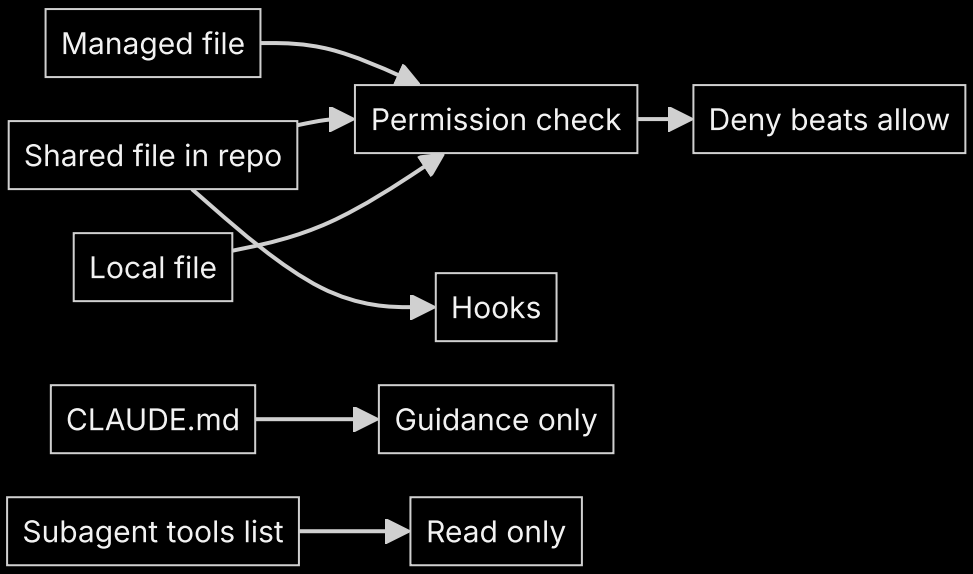

D6.4 Architecture documentation

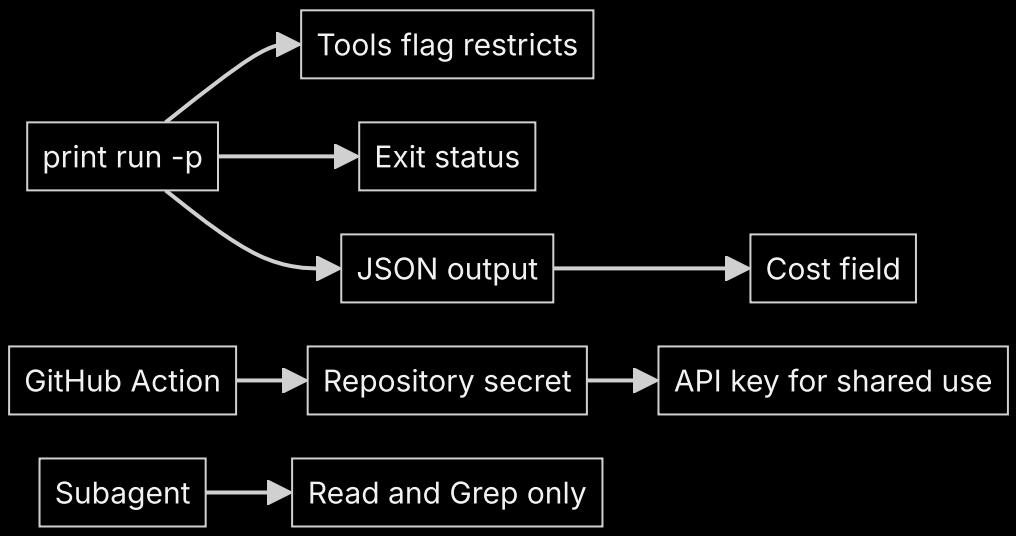

D6.5 Lifecycle phases

D7.1 Team configuration for Claude Code

D7.2 AI-assisted workflows with Claude Code

D7.3 Diagnosis and operational resolution
